ProofBase RB1F Render Base

High-strength, flexible render base coat

ProofBase RB1F is a tough and flexible render base coat designed to prevent cracking and to increase the performance of Monocouche and thin coat render systems.

RB1F uses a highly polymer-modified cement based formula that incorporates fibres for increased flexibility and fracture strength. Typical use is as a base coat on difficult substrates that require additional strength and stability and an improved mechanical key before they can be rendered with a finishing coat.

Key Benefits:

- ✓ Polymer modified for improved bond strength
- ✓ Fibre reinforced for strength and flexibility
- ✓ Perfect base coat for all render systems
- ✓ Compressive strength category: CS III
- ✓ Capillary water absorption category: W2

Application:

- Empty bag into large bucket.
- Add 5-6 litres of water and mix until fully incorporated.
- Allow to stand for 5 minutes before applying by hand or with a spray pump.
- Typical applicable depth is 5mm-20mm as a base coat.
- Scratch horizontally before fully dry to provide extra mechanical key for top coats.

Health & Safety:

ProofBase RB1F render base is a cement based product which means it can cause skin irritation and can damage eyes on contact and lungs if inhaled. Always wear adequate PPE and wash thoroughly with clean soap and clean water in case of contact. Keep out of the reach of children and pets. Immediate medical advice should be sought in case of adverse reactions. For full health and safety details please refer to the *ProofBase RB1F Material Safety Data Sheet*.

Disclaimer: The details published in this data sheet provide a basic guide and overview to usage and application and should not be relied on as definitive methodologies, nor do they imply and form of warranty or guarantee. The end user should refer to www.proofshield.co.uk/technical/downloads for more detailed installation and product information.
